

=====8/12/2022=====

Group ID: 07

Project name: Cadger

Prepared by: **Nguyễn Khải Phú**

Team members:

20127124 - **Đặng Bảo Châu** *Project manager*

20127062 - **Nguyễn Khải Phú** *Process engineer*

20127068 - **Hồ Minh Thanh Tài** *Business Analyst*

20127045 - **Võ Đình Khôi** *Test Manager*

20127406 - **Thái Cẩm Phong** *Software Engineer*

1. Summarize

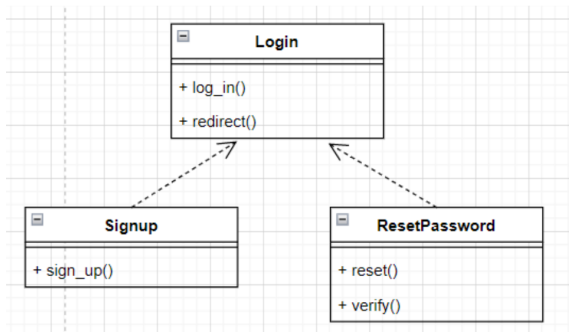

Heavy work was expected this week. Deadlines were set appropriately in order to give the whole team enough time. Everyone worked well and met their deadlines. Mr. Tài is currently facing serious health issues, and is not included in this week's assignment. This unexpected problem exposed the vulnerability and rigidness of the team's workflow. The team is going to plan appropriately and have better preparations going into next week.

2. Screenshots of all tasks

- Bảo Châu

View

4.1 Component: Authentication

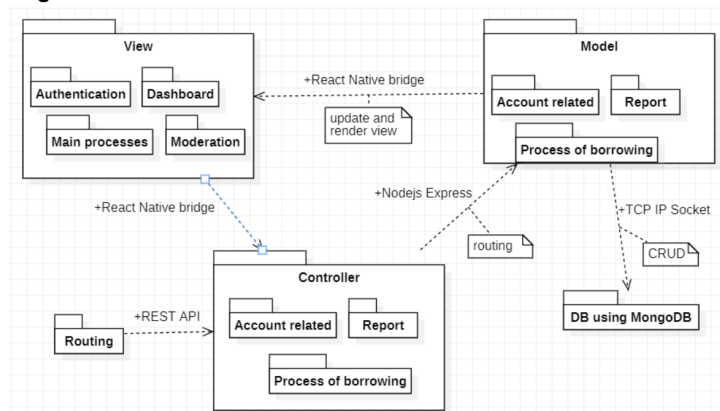

This component manages all GUIs of sign up, log in and reset password pages.

4.2 Component: Dashboard

- Đình Khôi

4. Logical View

- Khải Phú

Controller

4.2 Component: Account-related

- This component contains 4 main classes:
- Authentication: manage the signing up, logging in and resetting password processes. In signup() and resetpass(), the input that user enters will be hashed and passed down to the Model package
 - Personal info: manage user's personal information page. The method create_info() is automatically called after the signup() finishes
 - Log: manage user's history of borrowing and lending activities
 - Notification: manage user's notifications page. Users are notified whenever a borrow request or a return request is made to them

- Cẩm Phong
